Attn.: Mr. Eli Gruber – President & CEO  
Water & Wastewater Treatment Solutions  
ECOLOGIX Environmental Systems

Dear Mr. Gruber,

I am pleased to acknowledge that the Wastewater Treatment Plant on Russky Island, Vladivostok, has been fully operational since September and 100% automated since December of 2012. The 10,000 m<sup>3</sup>/day IBR sewage treatment system by Ecologix Environmental Systems has taken a relatively small footprint and has fully met all our performance expectations. From everything that we can tell this is a high quality system with some of the finest brand equipment and state-of-the-art automation and control systems available anywhere. Furthermore, we were very impressed with the level of detail that Ecologix provided on both the engineering and the operational aspects of the plant. It was invaluable to the success of the project.

In spite of language, cultural and geographical barriers, Ecologix managed to stay on top of the challenges and continue to deliver on a timely basis and in accordance with the project timetable. Throughout the past three years of our engagement, you and your engineers acted responsibly and professionally. All issues were addressed in a timely manner and to our complete satisfaction.

I would be glad to engage Ecologix in similar projects that we may have in the future and I would whole heartedly recommend your fine organization to anyone interested in having reliable engineering and system integration in the area of municipal or industrial wastewater treatment.

Sincerely,

Aras Agalarov

President of JSC Crocus International
